```

Create routes

Src/router/index.js

```
import { createRouter, createWebHistory } from "vue-router";
import HomeView from "../views/HomeView.vue";
import ProjectsView from "../views/ProjectsView.vue";
import ContactView from "../views/ContactView.vue";

const routes = [
  { path: "/", name: "Home", component: HomeView },
  { path: "/projects", name: "Projects", component: ProjectsView },
  { path: "/contact", name: "Contact", component: ContactView },
];

const router = createRouter({
  history: createWebHistory(),
  routes,
});

export default router;
```

App.vue

Update the App.vue

```
<script setup>
import NavBar from './components/NavBar.vue';
import Footer from './components/Footer.vue';
</script>

<template>
  <NavBar />
  <router-view />
  <Footer />
</template>
```

```
<style>
```

```
</style>
```

Update the main.js

```
import { createApp } from 'vue'  
import './style.css'  
import App from './App.vue'  
import router from './router/index.js'  
  
createApp(App).use(router).mount('#app')
```

Improving the Projects page to use the Vue concepts

```
<template>
  <main class="projects">
    <div class="container">
      <h1>My Projects</h1>
      <p class="subtitle">A showcase of my recent work and personal projects</p>

      <div class="projects-grid">
        <!-- Project Card 1 -->
        <div class="project-card" v-for="project in projects" :key="project.id" >
          <div class="project-image">
            
          </div>
          <div class="card-content">
            <h3>{{project.title}}</h3>
            <p>{{project.description}}</p>
            <router-link to="/project-details" class="btn-details">View
            Details</router-link>
          </div>
        </div>
      </div>
    </main>
  </template>

<script setup>
import {ref} from 'vue';

const projects = ref([
  {
    id:1,
    title:'Task Manager',
    description:'A productivity app for managing tasks and tracking your daily
    goals efficiently.',
    image: '/task.jpg'
  },
  {
    id:2,
    title:'E-Commerce',
    description:'A full-featured online shopping platform with seamless user
    experience.',
    image: '/ecommerce.jpg'
  },
  {
```

```

        id:3,
        title:'Tech-With-Ease Website',
        description: 'A modern website designed to make technology accessible and
        easy to understand.',
        image:'/tech.jpg'
    }
  ])
</script>

<style scoped>

</style>

```

NB: Ensure you keep the images inside the public folder

Turning the course card to a component

Step 1: Create the ProjectCard Component

Create a new file src/components/ProjectCard.vue with this content:

```

<template>
  <div class="project-card" >
    <div class="project-image">
      
    </div>
    <div class="card-content">
      <h3>{{project.title }}</h3>
      <p>{{project.description }}</p>
      <router-link to="/project-details" class="btn-details">View
Details</router-link>
    </div>
  </div>
</template>

<script setup>
defineProps({
  project: {
    type: Object,
    required: true
  }
});
</script>

<style scoped>

```

```
</style>
```

Step 2: Update ProjectsView.vue to Use the Component

```
<template>
  <main class="projects">
    <div class="container">
      <h1>My Projects</h1>
      <p class="subtitle">A showcase of my recent work and personal projects</p>

      <div class="projects-grid">
        <!-- Project Card 1 -->
        <ProjectCard v-for="project in projects" :key="project.id"
          :project="project" />
      </div>
    </div>
  </main>
</template>
```

```
<script setup>
import {ref} from 'vue';
import ProjectCard from '../components/ProjectCard.vue'

const projects = ref([
  {
    id:1,
    title:'Task Manager',
    description:'A productivity app for managing tasks and tracking your daily
    goals efficiently.',
    image: '/task.jpg'
  },
  {
    id:2,
    title:'E-Commerce',
    description:'A full-featured online shopping platform with seamless user
    experience.',
    image: '/ecommerce.jpg'
  },
  {
    id:3,
    title:'Tech-With-Ease Website',
    description: 'A modern website designed to make technology accessible and
    easy to understand.',
    image: '/tech.jpg'
  }
])
```

```
1)
</script>

<style scoped>
</style>
```
